Stabilization of the coding scheme - CCCSL dataset

Date update: 2020-11-13

AUTHORS:

A. DESVARS-LARRIVE, M. BARTOSZEK, J. EL-GOUKHI, M. GRUBER

Note

The CCCSL dataset is continuously updated.

New measures appears regularly (that have not been implemented before). Therefore, throughout the data collection process, new categories, subcategories, and codes emerged, derived directly from the text data sources. The emergent (inductive) categories and subcategories are openly coded by the data collectors or by the data curators. In a second step, inductive categories and subcategories are compared together and in relation to the entire dataset to detect co-occurrences (codes that partially or completely overlap) and redundancies. Codes with the same meaning are aggregated. The categories and subcategories are tightened up to the point that maximized mutual exclusivity and exhaustiveness.

In red: new L2

Categories associated to the eight themes (L1) used to classify the NPIs.

| Theme | Associated categories – Previous version | Associated categories – Updated version |
|---|--|--|
| Case identification, contact tracing and related measures | [1] Activate case notification | [1] Activate case notification |
